

ABSTRACT

A hanging electro-stimulating massage belt wherein the belt is an elongated band having a single conducting area or a plurality of conducting areas of opposite polarities for covering the neck or
5 the shoulders of a person. Two ends of the massage belt are provided with weight bags, buckles or adhesive members for stabilizing the conducting areas on human body. The massage belt is connected to a controller that sends out pulsating electric signals for providing electro-stimulating massage at low or
10 middle pulsating frequencies.
